Endpoints	Method	Description	Body Request	Body Response	
/TodoList/	Get	To get all the todolist that have been posted.	-	All the todo items that are to be rendered on the web app page	
/Todlist/	Post	To post the todo list/items and the the additem function in react can fetch from this path (/Todolist/)	-	-	
/TodoList/{todo _id}/	Delete	The deleteItem function in React file can refer to this path to delete the item identified by the id from the database in this case mysql	-	The response will be the todo list after the deleted item deleted by the provided id.	
/TodoList/{todo _id}	Put	This method is used for updating/editing the identified text/todoitem by the id.	-	The response will be the todo item that has been updated/edited so that it can be rendered once it has been fetched.	
/TodoList/	Delete	This is used by the clearAll function in react to delete all the todolist. No need for 'Id' since all list are to be deleted	-	The response will be the empty todolist table as all the list has been deleted.
